Collaborator

It would be helpful to add a detailed, step-by-step example in the OpenAI Cookbook for fine-tuning GPT-4 using Hugging Face's Transformers library.

Specifically, the example should cover:

1. Setting up a fine-tuning environment (including dependencies)
2. Downloading and preparing a dataset for fine-tuning
3. Fine-tuning a GPT-4 model with Hugging Face's Trainer API
4. Evaluating the model's performance on a validation set
5. Saving and loading the fine-tuned model for inference
